PREAMBLE

1. Routine Practices are the Public Health Agency of Canada’s (PHAC) minimum standard of infection prevention and control (IPAC) practice to prevent the spread of Microorganisms that cause Infection in all health care settings.

2. Additional Precautions (i.e. contact, droplet, and airborne) in addition to Routine Practices are based on the route of spread of Microorganisms that are known or suspected.

POLICY STATEMENTS

1. All Staff must follow Routine Practices and Additional Precautions in all health care settings and at all times to reduce the spread of Microorganisms that cause infection to patients, Staff, visitors and volunteers.

2. Clinical Care Providers will complete a Point-of-Care Risk Assessment (PCRA) before any interaction with patients or their environments.

3. Clinical Care Providers will implement Contact Precautions based on results of a PCRA. IPAC must be notified. A confirmed infectious diagnosis is not necessary. Refer to the Disease Index/Transmission Based Summary Table for guidance on routes of transmission and type of precautions to be utilized.

4. Contact Precautions must only be discontinued in consultation with IPAC.

5. Contact Precautions must be communicated to all members of the health care team providing care, and upon transfer of the patient to receiving unit/department/facility or Emergency Health Services (EHS).

6. When initiating Contact Precautions for suspected outbreak situations, IPAC or the Administrator for the facility (after hours) must be notified. Refer to policy IPC-CD-001 Outbreak Management.

7. The first person to suspect/identify a notifiable disease or condition must notify public Health per “It’s the Law Reporting Notifiable Diseases and Conditions”.

8. Environmental controls such as: Personal Protective Equipment (PPE), accommodations, and additional environmental cleaning must be put in place for all patients requiring Contact Precautions.

CLINICAL PRACTICE GUIDELINES

1. Source Control:
   1.1 Place Contact Precautions notification in/on the patient’s health record as per facility protocol and document usage in the health care record.

   1.2 Ongoing assessment and documentation of stools for patients with diarrhea is critical to determine patient status and requirements for
continued Contact Precautions. A tool to help document stool patterns is the Bristol Stool Chart.

2. Patient Accommodation, Placement and Flow:

2.1 A private room with a private bathroom is recommended for patients placed on Contact Precautions.

2.2 When a private room is unavailable, cohort patients only under the direction of an Infection Control Practitioner (ICP) or the Administrator on call for the facility (if after-hours).

2.3 In a shared room, if a patient has diarrhea, assign a dedicated toilet or commode to that patient. Commodes must be emptied/disposed of in the soiled utility room.

2.4 Close the privacy curtain between beds to minimize opportunities for direct contact.

2.5 When a patient refuses routine Antibiotic Resistant Organism (ARO) screening (Methicillin resistant Staphylococci [MRSA] or Vancomycin-Resistant Enterococci [VRE]), they must be placed on Contact Precautions for their hospitalization or until appropriate testing is completed and is negative. Dedicated toileting facilities are required, but these patients may be placed on Contact Precautions in a semi private or ward.

2.6 Patients on Contact Precautions may use communal unit shower/tubs. Completely clean and disinfect any equipment (e.g. shower, shower curtain, or tub/shower chairs) after patient use as with Routine Practices.

2.7 Ensure that signage for Contact Precautions is clearly visible on entrance to patient room or bed space when in a shared environment.

2.8 Patient Flow/Transport:

2.8.1 Transporting patients on Contact Precautions must be avoided unless medically necessary.

2.8.2 The ambulation of patients on Contact Precautions may be restricted in order to minimize the potential for transmission of contact spread Microorganisms. Please refer to facility guidelines or contact IPAC.

2.8.3 Patients on Contact Precautions:

2.8.3.1 Are permitted to leave their room only for medically essential purposes or when ambulating on the unit with staff guidance.

2.8.3.2 Must perform hand hygiene upon leaving their room.

2.8.3.3 Must not visit other patients.

2.9 Transport to Other Services/Departments:
2.9.1 Staff must perform hand hygiene and wear appropriate PPE when entering the room/bed space and while preparing the patient (Refer to PPE section above for details).

**Note:** Patients do not routinely wear PPE for transport or ambulating.

2.9.2 Ensure the patient performs hand hygiene.

2.9.3 Wrap the patient in a clean blanket or sheet during transport.

2.9.4 Once patient is settled in stretcher or chair, remove PPE and perform hand hygiene prior to transporting the patient, put on clean gloves and other necessary PPE as per PCRA.

2.9.5 Maintain precautions during transport.

2.9.6 Patients should not routinely hold their own health records. Transport according to facility policy.

2.9.7 Advise the receiving area that the patient requires Contact Precautions.

2.9.8 Clean and disinfect the transport device immediately after use.

2.9.9 Remove gloves and perform hand hygiene

3. PPE for Contact Precautions:

3.1 Gloves (Clean non-sterile gloves):

3.1.1 Perform hand hygiene. Gloves must be worn by all Staff when there is anticipated contact with the patient or Patient Care Environment.

3.1.2 Change gloves and perform hand hygiene between activities with the same patient or when gloves have been contaminated, torn or soiled.

3.1.3 Remove gloves and perform hand hygiene prior to leaving patient’s room.

3.2 Gowns:

3.2.1 When indicated by a PCRA, wear a long sleeved gown to protect uncovered skin or clothing from direct contact with the patient, frequently touched environmental surfaces or objects, and when there is an increased risk of environmental Contamination due to incontinence, draining wounds, etc.

3.2.2 Put gown on before entering the room or bed space of the patient. Gowns should be cuffed (securement for sleeves riding up) and
long-sleeved, and offer full coverage of the body (front and back) from neck to mid-thigh or below.

3.2.3 Remove gown before leaving the patient’s room or bed space.

3.3 Mask (Surgical or Procedural)/Protective Eye Wear (goggles, shield):

3.3.1 When indicated by a PCRA, wear a mask and eye protection to protect the mucous membranes of the eyes, nose and mouth when there is the potential for splashes or sprays of blood, body fluids, secretions or excretions as per routine practices.

**Note:** If you are providing care to multiple patients on Contact Precautions, change PPE and perform hand hygiene between patients.

4. Management of the Patient Care Environment:

4.1 Patient Care Equipment/Supplies

4.1.1 Where possible, provide single use disposable or dedicated equipment for the patient. If disposable or dedicated equipment is not possible, clean and disinfect between patients as per Routine Practices.

4.1.2 For patients on contact for Enteric infections (C-difficile, Noroviruses etc.) a sporicidal product must be used and requires twice daily cleaning if C-difficile is suspected.

4.1.3 Dedicate a commode at the bedside for patient use in multi-bed rooms.

4.1.4 Place a laundry hamper in the single room as close to the exit door as possible or at the bedside of patients in shared accommodations. Special handling of linen is not indicated.

4.1.5 Place waste receptacle inside the patient room close to the door for PPE disposal.

4.1.6 Nutrition and Food Services Staff must perform hand hygiene and don gloves upon room entry and remove gloves and perform hand hygiene upon exit. Gloves are required for delivery and pick up of trays.

4.2 Cleaning the Patient Environment:

4.2.1 When precautions are discontinued or the patient is relocated, terminal cleaning and disinfecting of room/bed space, bathroom and changing of privacy curtains must be done.
4.2.2 Environmental Services Staff must wear a gown and gloves to perform housekeeping tasks.

4.2.3 Allow sufficient time for cleaning of rooms.

4.2.4 Remove Contact Precautions signage after the patient has been discharged and moved, and once cleaning has been completed.

4.2.5 Inform Environmental Services if special cleaning is required (e.g. Enteric for *C. difficile*, Noroviruses and Enhanced clean for Vancomycin-Resistant Enterococci (VRE), etc.)

4.2.6 For patients on contact for enteric infections (*C. difficile*, Noroviruses etc.) a sporicidal product will be used and requires twice daily cleaning if *C. difficile* is suspected.

5. Patient Education:

5.1 Educate patients, their visitors, families, and caretakers about the Contact Precautions being used, the duration, as well as the prevention of transmission of infection to others. Document education provided in the health care record.

6. Management of Visitors

6.1 The number of visitors should be kept to a minimum (1-2). Visitors should be instructed to speak with a nurse before entering the patient room.

7. Modification Of Contact Precautions For Long-Term Care Units - Resident Placement, Accommodation and Activities:

7.1 Perform a PCRA to determine placement, removal from a shared room, or participation in group activities.

7.2 Restrict participation in group activities if wound drainage or diarrhea cannot be contained.

7.3 Residents who are ill with diarrhea, nausea and vomiting must not have meals in the common dining room.

7.4 Ensure all residents perform hand hygiene (or are assisted as necessary) before and after participation with group activities.

8. Modifications of Contact Precautions for Ambulatory Care/Primary Care/Outpatient Settings:

8.1 Request that all patients clean their hands on arrival to the reception/registration desk.

8.2 Minimize contact between symptomatic patients and others.

8.3 Place in procedure room as soon as available. Contact Precautions signage must be placed outside of the room.
8.4 Minimize the number of supplies in patient care rooms. Storage in closed cupboards, drawers, etc. minimizes exposure to Microorganisms.

8.5 Do not touch supplies with soiled hands or gloves.

8.6 Do not touch privacy curtains with soiled hands or gloves.

8.7 Charts may be taken into the patient care room provided they are placed in a designated clean area (non-procedural) and are handled with clean hands.

8.8 Provide dedicated equipment for use with the patient (e.g. stethoscope, BP cuff, etc) when possible.

8.9 Clean and disinfect patient care equipment and patient environment as per inpatient requirements (described above).

8.10 If a patient sits in the public waiting room (fully clothed with wounds covered) it is not necessary to clean or disinfect the chair. Routine environmental cleaning is sufficient.

8.11 Patients may use public washrooms in the area. Additional cleaning is required when there is visible soiling.

9. Special Considerations for the Care of Patients on Contact Precautions in Home Care:

9.1 Notify the home care agency when a patient requires Contact Precautions.

Appendix A - Definitions

**Additional Precautions**
Further precautions based on the method of transmission (i.e. contact, droplet, airborne) that are necessary when Routine Practices alone may not be enough to interrupt transmission of an infectious agent.

**Antibiotic-Resistant Organisms (ARO’s)**
A microorganism that has developed resistance to the actions of several antimicrobial agents of clinical or epidemiological significance.

**Clinical Care Provider**
Any person who delivers clinical care to a client, patient or resident.

**Colonization**
The presence or growth of a microorganism in or on a body with growth and multiplication but without tissue invasion, cellular injury, or symptoms.

**Contact Precautions**
Used in addition to Routine Practices to reduce the risk of transmitting infections via contact with an infectious person and/or their environment.

**Contact transmission (direct or indirect)**
Contact transmission occurs when contact exposure leads to an infectious dose of viable microorganisms from an infected/contaminated source, resulting in colonization and/or infection of a susceptible host.

**Contamination**
The presence of an infectious agent on hands or a surface. This may include: clothing, bedside items or equipment, medical or surgical instruments, or other inanimate objects.

**Enteric**
Gastrointestinal-related illnesses (e.g. diarrhea, vomiting).

**Infection**
Entry and multiplication of an infectious agent in the tissues of a host leading to a response from the host’s immune system. Infection may or may not lead to clinical disease.

**Methicillin-Resistant Staphylococcus aureus (MRSA)**
Strains of *Staphylococcus aureus* that have developed resistance to beta-lactam antibiotics (i.e. penicillins, cephalosporins, and carbapenems).

**Microorganisms**
A bacteria, virus, fungi, protozoan, or prion capable of causing diseases (infection) in a source or a host.
