

N95 Selection Helpful Advice!

Only 3M masks are to be utilized for fit testing. Below is a list of the following models in supply.

FIT TESTED N95 MASKS:

Approved 3M Fit Testing Masks	Images
<p>1870Plus (Is highest supply and generally fits tests well across face types)</p> <p>Look for the 3M symbol, number on the mask, N95 rated</p>	
<p>1860 or 1860s</p>	<p>Follow same process as above</p>
<p>1804 or 1804s</p>	<p>Follow same process as above</p>
<p>8210 (no fluid resistance) *</p>	<p>Follow same process as above</p>

*Please keep in mind that the 8210 model can be used for air borne precautions, but if using for droplet a face shield is required.

Well-fitting N95's

Other N95s such as the Harley L-188 are to be used as “better fitting” mask alternatives and not to be confused with the 3M fit testing models.
