

COVID-19 Vaccine Spring Dose Eligibility

The following people at highest risk of severe illness from COVID-19 should get a spring dose if their last dose was more than 6 months ago (168 days):

- ✓ People aged 80 years and older
- ✓ People aged 18 years and older living in long-term care or nursing homes, seniors congregate living settings, or residential care facilities
- ✓ People aged 18 years and older who are [moderately to severely immunocompromised](#)

All people of African descent and First Nations people ages 50-79, and all people ages 65-79 can consider getting a spring dose 6 months after their last dose, **especially those who haven't yet had COVID-19.**

Those who have had COVID-19 and have already been vaccinated may have stronger, longer lasting protection against COVID-19.

Those who are eligible can receive the spring dose until June 30, 2023.

If you do not receive the spring dose before the end of June, you will need to wait until the fall for your next dose so you have better protection during respiratory illness season.

Revised March 17, 2023
